AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1.   (Currently Amended) A digital camera comprising:

a reader that can read image data from two or more recording media;

a display which performs display of the image data; and

a display controller which causes said display to display [[the]] information that specifies the recording medium from which the image data was read as well as the image based on the image data.

2.   (Currently Amended) A digital camera according to claim 1, wherein the information which specifies the recording medium comprises an indicia that distinguishes a name that is assigned to the recording medium from which the image data was read from others of the two or more recording media.

3.   (Original) A digital camera according to claim 1, further comprising two or more card slots, and the recording media are memory cards mounted in these card slots.

4.   (Original) A digital camera according to claim 3, wherein the information which specifies the recording medium is information that indicates the card slot in which the memory card is mounted.

5.   (Original) A digital camera comprising:

a reader which reads image data from a first recording medium and a second recording medium;

a display which performs display of the image; and

- 4 -

a display controller which causes said display to display essentially simultaneously a first image based on the image data read from the first recording medium and a second image based on the image data read from the second recording medium.

6.   (Original) A digital camera according to claim 5, wherein said display controller causes said display to display the information that specifies the first recording medium in a manner such that it is associated with the first image, and causes said display to display the information that specifies the second recording medium in a manner such that it is associated with the second image.

7.   (Currently Amended) A digital camera comprising:

a reader which can read image data from any of two or more recording media;

a display which performs display of the image; and

a display controller that, by handling a plurality of items of image data recorded in the two or more recording media in sequence based on a ~~prescribed~~ user specified rule, causes said display to sequentially display the plurality of images in accordance with the sequence.

8.   (Currently Amended) A digital camera according to claim 7, wherein the sequence based on the ~~prescribed~~ user specified rule is the ascending or descending order of the recording times for the plurality of items of image data.

9.   (Currently Amended) A digital camera according to claim 7, wherein the sequence based on the ~~prescribed~~ user specified rule is the sequence in accordance with the predetermined order of the two or more recording media.

10.   (Original) A digital camera according to claim 7, wherein said display controller causes said display to display the information that specifies the recording medium from which the image data was read together with the image displayed based on image data.

11.   (Original) An image display method in a digital camera comprising:

reading image data from one of two or more recording media; and

displaying an image based on the image data and the information that specifies the recording medium from which the image data was read.

12.   (Original) An image display method in a digital camera comprising:

reading image data from a first recording medium and a second recording medium; and

displaying the first image based on the image data read from the first recording medium and the second image based on the image data read from the second recording medium, essentially simultaneously.

13.   (Currently Amended) An image display method in a digital camera comprising:

specifying a rule for ordering reading one item of image data from a plurality of items of image data stored in two or more recording media, the ordering defining a sequence;

displaying an image based on the a selected one of the plurality of items of image data;

accepting a designation to display either a next image or a prior image; and

displaying a specifying the next item of image data following the displayed item of image data in accordance with the said sequence of the plurality of items of image data based on a prescribed rule when the image following the displayed next image is designated, and displaying a whereas specifying the image data item prior to the displayed item of image data in accordance with said sequence when the image prior to the displayed image is designated.
